

The background features a large, faint, light-colored circle on the right side. On the left, there are several thin, flowing, wavy lines in a light pinkish-red color that sweep across the frame.

MONQUZE

Smart Blood Donation Ecosystem

Every Minute Matters.

BUT WHAT IF

finding blood takes longer than saving a life?

What is the Problems

- SLOW SEARCH
- LACK OF TRUST
- POOR COORDINATION

Finding Blood in an Emergency Shouldn't Depend on Luck that is why we create

Monqez,

is a complete digital ecosystem that transforms blood donation into a faster, safer and more transparent experience.

Blood emergencies require immediate action, yet finding compatible donors is often slow, fragmented, and unreliable. Monqez bridges this gap by connecting patients, donors, hospitals, and blood banks in one trusted platform.

Why Monqez Matters

Faster Emergency Response

Hospital Integration

Trusted Donation Process

health tracking for donors

One connected ecosystem that saves time, builds trust, and helps save lives.

SWOT

Strengths

- Solves a critical real-life problem
- High user motivation
- real-time technology to be fast
- Ability to connect multiple stakeholders
- Potential to provide verified and pre-screened donors
- Can significantly reduce reliance on unstructured methods
- Opportunity to design an emergency-first UX
- Blood Passport.
- AI Health Analysis.

Weaknesses

- Requires a strong trust & verification system
- Heavy dependency on user adoption and active donors
- Needs accurate and constantly updated data
- Donors may arrive at the hospital and be found medically ineligible, leading to wasted time and delayed response in critical situations
- Technical complexity
- Medical/legal considerations (eligibility, safety, liability)
- Risk of poor experience if response is slow (users may abandon quickly)
- Requires integration with external entities

Opportunities

- Clear market gap (no strong, scalable solution in the region)
- local → nationwide → regional
- Partnerships with:
 - a. Hospitals
 - b. Blood banks
 - c. Government
- Adding advanced features:
- Increasing awareness about blood donation
- Building a trusted community platform
-

Threats

- Lack of user trust in digital platforms
- Potential fake requests or misuse of the system
- Legal and regulatory challenges in healthcare
- Competition from:
 - Existing apps
 - Social media (still dominant)
- Donor drop-off or low engagement over time
- Failure in emergency can damage the trust
- Privacy and data security concerns

- AI Health Assistant
- Rewards & Donation Tracking

How Monqez Saves Lives

Emergency Response Journey

01

Emergency Request

Hospital submits an urgent blood request through the dashboard, specifying the required blood type and quantity.

02

Smart Alert

Nearby eligible donors receive an instant notification showing the urgency and distance to the hospital.

03

Donor Verification

The donor completes a quick health assessment, and the app generates a secure QR Code for check-in.

04

Hospital Check-in

Hospital staff scan the donor's QR Code, allowing fast verification and direct access to the donation room.

05

Donation Complete

The donor receives confirmation, reward points, and the next eligible donation date.
